

Safety & Loss Control Opinion Survey

Management

This questionnaire can be used to obtain an impression about the way people participate in – and feel about – the safety activities of the organization.

Questions have been developed at three organizational levels: (1) senior and middle management, (2) direct supervision and (3) operational employees. To a large extent questions are the same going from one group to the other.

I have used these questionnaires in conjunction with audits that I used to do with the International Safety Rating System. The surveys done with these questionnaires were done prior to visiting the location to audit and that way I already had quite a bit of information before going to the actual site.

By comparing the responses from the three groups an impression can be obtained about the way the safety program is working in your organization. If all works well then there should only be minor differences between the three levels. If differences are substantial then the conclusion may be that the safety activities are not properly identified, communicated and/or carried out.

If differences between organizational groups are substantial, you may wish to carry out a safety audit to further identify strength and weaknesses. Other activities may include a 16-step rating to identify weaknesses in the overall process to obtain (safety) results

These overall results of these opinion surveys will probably run parallel to the results of the Loss control Maturity Profile evaluation which is better suited for classroom activities. The opinion surveys will provide more detailed information about the way several main safety program activities run in the organization.
